

Sequence and Data

Start to see programs as instructions that get the computer to achieve your goals. Your programs will include sequences of instructions that perform actions and work with data.

Key aspects include:

- Learn to build programs that involve sequence and data - including method calls, variables, and assignment statements.

Show us that you can:

- Create small programs with:
 - A sequence of instructions that achieve something
 - Variables
 - Assignment statements
 - Method calls, with a range of arguments
- Correctly use programming terminology to explain your code.
- Do this task **without** using any concepts we haven't covered yet.
- Capture your learning in the Learning Journey section. Include evidence (screenshots) of your progress, and your thoughts on what you accomplished, what challenges you faced, and what you found interesting.
- Provide sincere *reflections* in the Reflection section. Don't just tell us what you did, tell us what you *learned*. Reflections that are brief or shallow will not be accepted.

Complete the following:

1. Download and open the template from OnTrack.
2. Read [Chapter 0: Introducing Instructions](#).
3. From the **Sequence and Data** chapter review the [Overview section](#), then progress through the [Guided Tour](#).

Read actively!

Actively read these chapters. Build and run the sample programs, change it to test your understanding. Write in your Learning Journey and take screenshots to capture your understanding as it develops.

4. When ready, complete one of the [Test Your Knowledge](#) activities from the Activities section.
5. You should have enough to submit now, but if you want to deepen your understanding have a look at the concepts in the [In Depth](#) section.
6. Complete your submission – complete the summary and related activities in the template.
7. **Upload** to OnTrack and **engage with feedback** to get this complete!

Tip: Initiate feedback

When you submit your work, you can add a comment to your tutor. It is a great idea to use this to ask for specific feedback on your work. This can help make sure you receive the most effective feedback to support your learning.

Available Resources

We have many resources to assist in your learning journey – if you are ever unsure then please reach out to us, we are always happy to help.

- **The SIT102 Teams channel** – an active learning resource with weekly announcements from the Unit Chair, and regular discussions/assistance from the SIT102 teaching team and students.
- **Seminars** – you can attend both on-campus and online sessions, and join as many as you like each week. Your tutors will provide demonstrations and assistance to help guide your learning.
- **HelpHubs** – there are sessions hosted nearly everyday, both on-campus and online providing one-on-one assistance from a tutor. Please join as many as you like.

- **PASS sessions** – running every week, these sessions are run like a study group, hosted by a past SIT102 student.

For more information about the above resources please speak to your tutor or visit the SIT102 Teams channel.
